

Movies Recommendation Chatbot Project

Quick Presentation of our Chatbot:

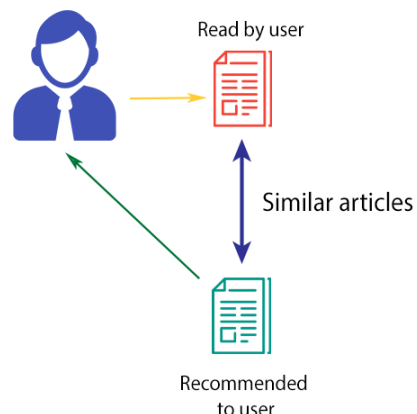

This Chatbot aims at recommending movies to a user based on a movie he types in. For example, if the user says that he has previously watched 'Star Wars II', the Chatbot should be able to recommend him a list of movies that other users who had also watched and liked 'Star Wars II' have liked, such as 'Star Wars III', 'Harry Potter I' or 'Guardians of Galaxy'. To do so, we have used the TMDB API (The movie database API: <https://developers.themoviedb.org/3/getting-started/introduction>)
